

GlowKey

Logo & Icon Set Design Assets

Design Rationale: The identity bridges the tension between unobtrusive utility ("Lowkey") and the moment of language clarity ("Glow"). The single point of light serves as the language signal in full-color assets, while the menu bar strictly utilizes silhouette, adhering to native macOS guidelines.

App Icon

Squircle Icon (.icns master)

Designed to the Apple Human Interface Guidelines icon grid. The icon features a transparent keyboard overlay on a dark system background. It highlights a glowing point on the letter 'G' + 'lowkey', acting as a subtle nod to the Vietnamese diacritics.

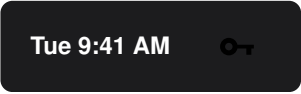

Delivered as vector master and .icns ladder (16px to 1024px).

Wordmark

G lowKey

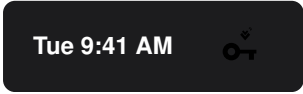

Set as a lockup for README headers and the About window. The wordmark uses weight contrast to reveal the "lowkey" reading inside "GlowKey". A subtle glowing light acts as a standalone diacritic, bracketing the dual reading elegantly.

Menu-bar Glyphs

OFF (Passthrough)

Template monochrome icon. Represents the quiet, un-intrusive background agent. The base key silhouette is clean and easily recognizable at 16pt.

ON (Vietnamese Active)

Features the distinctive Vietnamese circumflex and hook (ô) layered over the key bow. It provides a clear silhouette change, allowing for instant recognition at a glance without relying on color.
